Hi Sarah,

Thank you all so much! This will certainly help us figure out how to prioritize our sampling. We are getting a ton of calls now, especially since the public meeting. Prioritizing is key. We have gotten some samples back and I'm hoping the results will be good. Contrary to earlier reports, my sampling teams report that they have not seen any discolored wells.

Hi Joyel and Cynthia –

Carol and Greg did a great job helping to inform private wells along the Animas that are alluvial. See attached lists and map. Carol is going to look at distance from River next.

Carol would be the best person to walk you through this and how it might be helpful if you want to give her a call: 312-6310 (office) or 720-260-7726 (cell). Or you're welcome to call me, too.

Thanks all!

As requested attached is the data on private wells associated with alluvial deposits adjacent to the Animas River from Silverton to the New Mexico State line including wells within the exterior boundary of the Southern Ute Reservation.

I would like to come and explain a little more about the data.

Attached are two files. I down loaded all the data from wells that would be located within the boundaries of the alluvium and is along the Animas River both north and south of Durango to the Colorado/New Mexico state line.

Between the two reaches described above there are about 1,100 wells.
